Please find attached the updated groundwater analytical tables, depth to water, vertical gradient breakdown and hydrograph along with the lab report from the 7-26-16 REI groundwater sample event. I am working on the update report and hope to have it completed in the next few weeks.

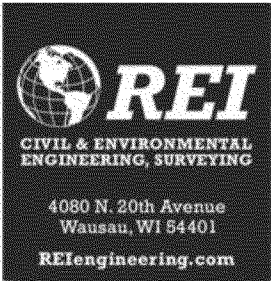

I know that there has been a request for concurrent and timely release of data to all interested parties for this investigation, but I do not believe I have received any results of the work completed by Bristol (other than the vapor results) or any data from the temperature cable deployment/USGS survey. Both are agenda items for the upcoming conference calls.

We have another spill call and I need to run. Any information for the above would be appreciated.

Thank you,

David N. Larsen P.G
